Lesson plan · for the teacher

Leading AI at school: unit check

AI · Level 4 · Unit check

Time	Materials
45 min	Board, chalk, paper. No devices needed.

Learning goals

- Audit an AI tool
- Your school's AI policy
- Assessment when pupils have AI
- Design an AI-supported unit

Activity: Team quiz

1. Make teams of three or four colleagues
2. Read each question aloud; teams agree on one answer
3. Reveal the answer and ask one team to explain why
4. Note the question that caused most debate, for your next staff meeting

Discussion

- Which idea will you use first in your school?
- Which question caused the most debate, and why?
- Who else in your school should see this unit?

Exit ticket

- One step I will take this month, and who I will take it with

Try it in class tomorrow

Pick one step from this unit — an audit, a policy principle, a redesigned task or a unit plan — share it with a colleague this week, and agree a date to look at the results together.

Worksheet · for pupils

Leading AI at school: unit check

AI · Level 4 · Unit check

Name _____ Class _____ Date _____

1 **You plan to audit a reading app that sends pupils' recordings to the supplier. What must you know before any pupil reads into it?**

- ◯ Where the recordings go, who sees them, and whether they train later models
- ◯ Its overall accuracy score
- ◯ Whether other schools like it

2 **A detector score of 90% AI proves that a pupil used AI.**

- ◯ True
- ◯ False

3 **Put the steps of a small tool audit in order.**

- ☐ Decide: adopt, pilot or refuse
- ☐ Count the tool's errors for each group
- ☐ A teacher and the tool mark the same samples
- ☐ Collect about twenty real samples from each group
- ☐ Choose the groups to compare

4 **Match each policy principle to what it means.**

Purpose	• • • •	No pupil loses out for having no phone or data
People stay responsible	• • • •	Staff and pupils say when AI helped
Openness	• • • •	A person checks and decides, never AI alone
Equal access	• • • •	AI is used only when it helps learning

5 **A committee is choosing a tool with a weighted decision matrix. When should it agree the weights?**

- ◯ Before any tool is scored
- ◯ After scoring, to fit the best tool
- ◯ Only if two tools tie
