What is AI? Review

AI · Level 1 · Unit check

In this unit

- AI all around you
- How machines learn
- How AI sees
- When AI gets it wrong

The big ideas

- AI learns patterns from examples and makes predictions; it doesn’t think or feel
- Collect, label, train, test on new examples, then use
- A picture is a grid of numbers, and vision AI learns patterns in them
- False alarms and misses: people choose which matters more, and you check, ask and report

Team quiz

1. Make teams of three or four
2. Read each question aloud; each team agrees on one answer
3. Reveal the answer and ask one team to explain why
4. Write down the question your team found hardest, and look it up in the lesson

Let’s discuss

1. Where will you look for AI tomorrow, and what will it be predicting?
2. Which question surprised you, and why?
3. What will you tell your family about this course?

Exit ticket

- One idea from this course I’ll remember, and where I’ll use it
