Ask good questions

AI · Level 2 · Lesson 2

Today we will

- Write a clear request: what you want, what you know, your level and the form of the answer.
- Ask for a hint, steps or a quiz instead of the answer.
- Keep personal details out of what you type.

Remember

- A chatbot only knows what you type: a vague request gets a vague answer.
- Hints, steps and quizzes keep the thinking, and the learning, yours.
- Never type your name, address, phone number, passwords or photos into a prompt.

Prompt makeover

1. Warm-up (3 min): Read Yusuf’s one-word request, “fractions”, and guess the reply.
2. Four parts (5 min): List the four parts of a good prompt from memory.
3. Makeover (8 min): Rewrite three weak requests into strong ones.
4. Hint, not answer (5 min): Turn one homework question into a request for a hint.
5. Privacy check (4 min): Cross out anything personal in a sample prompt.

For a revision group or at home. Write three weak requests on paper (such as “science help”, “write my story” and “fractions”) and one sample prompt with a made-up name, school and phone number in it.

Let’s discuss

1. Why does “fractions” get a worse answer than a longer request?
2. When is asking for the answer fine, and when does it stop you learning?
3. What would you never type into a chatbot, and why?

Exit ticket

- Write one strong prompt for your next homework that asks for a hint, not the answer.
