Train your own model: review

AI · Level 3 · Unit check

In this unit

- Data first
- How a classifier decides
- Test it honestly
- Fair for everyone

The big ideas

- A model only knows its data: plan it, check it, collect it fairly
- Features and nearest neighbours: how a classifier decides
- Only examples the model never saw give an honest score
- Test every group, and fix bias in the data

Team quiz

1. Make teams of three or four, or quiz a family member
2. Read each question aloud; agree on one answer
3. Reveal the answer and explain why it is right
4. Write the hardest question in your notebook to revise

Let’s discuss

1. Which idea from this unit surprised you most?
2. What would you check first before trusting an AI tool’s score?
3. What model would you like to build, and whose data would it need?

Before you go

- One question I will ask about the next AI tool I use
