Design an AI solution

AI · Level 4 · Lesson 3

Today we will

- Start from a real local problem and its people, and ask whether AI is needed.
- Plan the data: where from, with whose permission, and what the AI does with it.
- Plan for harm: who could be hurt, and how a person stays in charge.

Remember

- People first, then the tool: a simple fix may beat AI.
- Use only the data you need, with permission, and nothing personal unless people agree.
- An honest “I don’t know”, a source and a person in charge make AI safer.

Design sprint

1. Problems (4 min): Each person lists two problems they see at school or nearby.
2. Choose (4 min): Pick one, and name who has it and when.
3. Simple fix? (5 min): Find the simplest fix without AI, then decide if AI is needed.
4. Plan (10 min): Fill in the five headings of a design plan on one page.
5. Harm check (5 min): Swap plans and find one way the other plan could hurt someone.

For a group of three or four, at school or at home. You need a large sheet of paper and pens.

Let’s discuss

1. Which problem near you would you most like to solve, and who has it?
2. When is a notice board better than an AI?
3. Who should be in charge when your AI makes a mistake?

Exit ticket

- My problem, who has it, and whether AI is really needed.
