Test and pitch it

AI · Level 4 · Lesson 4

Today we will

- Test a paper prototype with real users, and change it.
- Explain how your AI decides, in words a user understands.
- Pitch it in two minutes: problem, users, data, how it works, risks, trust.

Remember

- Watch where users get stuck, and don’t help: that’s your most useful data.
- Explain in plain words: what it uses, what it does, how sure it is.
- Name the risks and your plan for them: honesty builds trust.

Pitch practice

1. Prototype (6 min): Draw two or three screens of your idea on paper.
2. Test (6 min): One person plays the user, one the AI; the rest take notes.
3. Change (4 min): Fix one thing that confused the user.
4. Pitch (8 min): Each person or team pitches for two minutes.
5. Questions (5 min): Listeners ask questions; the team writes them down.

For a group or your family. You need paper, pens and a timer (any phone or watch).

Let’s discuss

1. What did your user find confusing, and why didn’t you notice it yourself?
2. How would you explain your AI to a grandparent in one sentence?
3. Why does naming the risks make people trust a pitch more?

Exit ticket

- One sentence explaining how my AI decides, in my user’s words.
