Safe Wi-Fi

Cyber security · Level 2 · Lesson 4

Today we will

- Explain what the owner of a Wi-Fi network can see.
- Explain what the padlock (HTTPS) hides, and what it doesn’t prove.
- Choose when to use mobile data instead of free Wi-Fi.

Share less on Wi-Fi

- The owner sees which sites you visit
- HTTPS hides what’s inside
- A network’s name proves nothing
- Money and marks: mobile data

What can the café owner see?: Postcards and envelopes

1. Warm-up (5 min): Who could read a postcard on its way?
2. Teach (8 min): HTTP is a postcard, HTTPS a sealed envelope.
3. Draw the journey (15 min): The café, the phone, the site, and what travels.
4. Share (7 min): What should we never do on free Wi-Fi?
5. Wrap up (5 min): Exit ticket.

Before the lesson, draw a café, a phone and a website on the board. Prepare an open sheet with a short message (the postcard) and a folded, sealed envelope with only an address on it.

Let’s discuss

1. What can the café owner see on a plain page?
2. Does the padlock prove a website is honest?
3. Why should money go over mobile data?

Exit ticket

- One thing I will never do on free Wi-Fi + why.
