Lesson plan · for the teacher

Incident drills: practise before it happens

Cyber security · Level 4 · Lesson 3

Time
30 min

Materials
Four role cards: incident lead, communications lead, technical help, record keeper; The scenario's three updates, each on its own sheet; A sheet and pen for the record keeper

Learning goals

- Run a 30-minute tabletop drill with colleagues.
- Give each person a role and practise it.
- Turn what the drill reveals into changes.

Activity: Tabletop drill: the page taken over

1. Set-up (3 min): Hand out four role cards: incident lead, communications lead, technical help, record keeper. Everyone else plays staff. Say clearly: we are testing the plan, not people.
2. Update 1 (7 min): Read: "7 am. A parent calls: the school page is selling cheap laptops." Ask: who do we tell first, and what do we do in the first hour? The record keeper writes down the time and each decision.
3. Update 2 (7 min): Read: "8 am. Two parents say they paid a 'fee discount' to a new number. Nobody can find the page's password." Ask: what message does the communications lead send, and where? Who tries to recover the page, and how?
4. Update 3 (6 min): Read: "10 am. A local journalist calls. The school internet is down." Ask: who speaks to the journalist, and where are the key phone numbers on paper?
5. Debrief (7 min): Each person names one thing that worked and one that didn't. Agree on three lessons, and for each one a change, an owner and a date.

Prepare four role cards, the three updates on separate sheets, and a sheet for the record keeper. Ask the head teacher to open the drill and say that nobody is being tested.

Discussion

- Where is the recovery email for our page, and who can reach it?
- If the internet were down, where would we find the key phone numbers?
- What should parents hear from us in the first hour?

Exit ticket

- One weak step the drill found, and the change I will make.

Try it in class tomorrow
Ask your head teacher for 30 minutes of the next staff meeting. Bring one scenario on paper, told in three updates, and four role cards: incident lead, communications lead, technical help and record keeper.

Worksheet · for pupils

Incident drills: practise before it happens

Cyber security · Level 4 · Lesson 3

Name _____ Class _____ Date _____

1 **In the drill story, a teacher clicked a fake link first. How should the drill treat that?**

- ◯ Find who would be to blame, so everyone learns
- ◯ As a weak step to fix: what would help someone report it fast?
- ◯ Leave it out of the story, so nobody is upset

2 **Match each drill role to its job.**

Incident lead	• • • •	Writes down times, decisions and evidence
Communications lead	• • • •	Recovers accounts and unplugs infected devices
Technical help	• • • •	The only voice to parents
Record keeper	• • • •	Decides what happens next and keeps time

3 **Which of these should a drill test? Choose all that apply.**

- ☐ Whether anyone can find the page's recovery email
- ☐ Where the latest backup is, and whether it restores
- ☐ A paper list of key numbers for when the internet is down
- ☐ Each teacher's score on a scam quiz, reported to the head teacher
- ☐ Who should be punished for the incident

4 **A cyber drill needs the computer room, because staff must practise on real devices.**

◯ True ◯ False

5 **Put the steps of a drill in order.**

- ☐ Turn each lesson into a change with an owner
- ☐ Write down three lessons
- ☐ Read the three updates; the team decides after each
- ☐ At the start of the meeting, give out the four roles
- ☐ Before the meeting, write a realistic scenario in three updates

On a bad day at your school, which would break first: the contact list, the backups, the page's admins, or who speaks to parents? Why?
