Who else is watching?

Cyber security · Level 2 · Lesson 4

In this lesson you will

- Explain what a network, a website and a tracker can see.
- Use the padlock, mobile data and settings to share less.
- Say what private browsing does and doesn’t do.

Key ideas

- The network sees where you go
- The padlock hides what’s inside
- Private browsing: this phone only
- Free apps: paid with your data

Activity: Privacy clean-up

1. Warm-up (3 min): Guess what one free app knows about you.
2. Check (8 min): Open its privacy settings and note what’s on.
3. Change (5 min): Turn off two things it doesn’t need.
4. Share (4 min): Tell a partner one surprise.

No phone of your own? Do it on a family phone with its owner, or try the What others see on public Wi-Fi lab.

Let’s discuss

1. What can a café owner see when you use their Wi-Fi?
2. Why do free apps want your data?
3. When is private browsing actually useful?

Exit ticket

- One setting I turned off + what it was collecting.
