Pupils' data, cost and the right agent

AI agents · Level 2 · Lesson 4

Today we will

- Ask where an agent’s data goes before you send it.
- Share the task, not the child.
- Compare the cost of a cloud model and a model on the phone.

Remember

- A cloud agent sends your words away; a model on the phone keeps them.
- Names, marks, photos and health are personal data; children’s need the most care.
- Cloud: about 18 KB a request. Darsi Tiny: 2.8 MB once, then free and offline.

Where does the data go?

1. Warm-up (5 min): Who has pasted something into a chatbot?
2. Teach (8 min): Personal data, the law, and “share the task, not the child”.
3. Sort the cards (15 min): Phone, cloud without names, or never.
4. Do the sums (7 min): A month of cloud requests, on the board.
5. Wrap-up (5 min): Which agent for which job? Then the exit ticket.

Prepare ten job cards and three labelled sheets. Use made-up names only, and never real pupils’ records.

Let’s discuss

1. What would you never paste into a cloud agent?
2. When is a big cloud model worth its cost?
3. How could a school with no signal still use an agent?

Exit ticket

- Name one job for a cloud agent and one for a model on the phone, and say why.
