Lesson plan · for the teacher

How agents work: the loop, tools and memory: unit check

AI agents · Level 3 · Unit check

Time	Materials
45 min	Board, chalk, paper. No devices needed.

Learning goals

- Inside the loop
- How it picks a tool
- Memory: the context window
- Teaching it a new tool

Activity: Team quiz

1. Make teams of four
2. Read each question aloud; teams agree on one answer
3. Reveal the answer and ask one team to explain why
4. Write the hardest question on the board for tomorrow

Discussion

- Which idea will you use first with your class?
- Which of Darsi Tiny's mistakes surprised you most?
- What would you check before trusting an agent at school?

Exit ticket

- One thing I now understand about how agents work, and how I'll explain it to my pupils

Try it in class tomorrow

Pick the activity from this unit your class needs most (the paper strip, the new wordings, the ten-word window or the new signal), run it this week, and tell a colleague how it went.

Worksheet · for pupils

How agents work: the loop, tools and memory: unit check

AI agents · Level 3 · Unit check

Name _____ Class _____ Date _____

1 **In an agent's text, who writes each tool's result?**

◯ The model, from what it learned ◯ The app, from the tool ◯ The person who asked

2 **Put the app's loop in order.**

☐ Send the text again, until the model answers

☐ Run the tool and add its result

☐ Check the call

☐ The model writes a tool call

☐ Send the text so far to the model

3 **A call that copies a class name wrongly can safely run, because the tool will report an error anyway.**

◯ True ◯ False

4 **Match each slip to the check that catches it.**

9Z written as 9C	• • • •	No step before it may have failed
A reminder at 25:00	• • • •	The tool must be on
A call to a tool that is switched off	• • • •	Every detail must have the right shape
A reminder set after the timetable tool returned an error	• • • •	Every name must come from the request

5 **What does this program print?**

```
steps = 0
while steps < 5:
    steps = steps + 1
print(steps)
```

◯ 4 ◯ 5 ◯ Nothing: it never stops
