Design an agent for a school job

AI agents · Level 4 · Lesson 1

Today we will

- Start a design from a job and what a mistake would cost.
- Give an agent only the tools its job needs.
- Split the work into roles, with a person approving actions.

Remember

- Design the job first; choose the tools last.
- Least privilege: the fewest tools and the least data.
- Planner, checker, runner, and a person who says yes.

Design sprint

1. Warm-up (5 min): Which job would you hand to an agent?
2. Teach (8 min): Job, stakes, fewest tools, roles.
3. Design (15 min): Groups write a one-page design.
4. Swap and check (8 min): Find an extra tool or a missing yes.
5. Wrap-up (4 min): Agree on the best design, then the exit ticket.

Prepare five job cards and a set of the ten tool cards for each group (paper is enough). No phones are needed.

Let’s discuss

1. Which job at our school is too risky to hand to an agent at all?
2. Why is a checker made of simple rules often safer than a clever one?
3. Who should be named as responsible for an office agent?

Exit ticket

- Write one school job, the tools it needs, and one tool you would leave out.
