# Final project: an agent that helps for real

## Build an agent in Python: final project

# The challenge

- A study planner that reads your timetable
- A library helper that checks if a book is free
- A team reminder bot with a 'never send at night' rule

# Your milestones

- Read a tool call
- Tools are functions
- The agent loop
- Guardrails in code

# Build it

1. Pick an idea and write the plan
2. Reuse your milestone work
3. Test it: where does it work, where does it fail?
4. Explain it to a partner in your own words

# Let's discuss

1. What would change if one part of your project changed?
2. Where did it fail, and what did you change?
3. What would you build next?

# Before you go

- One thing I understand now that I didn't before this project.
