What you type can travel

AI security · Level 1 · Lesson 1

Today we will

- Explain where what you type into an AI tool can go.
- Sort information into green, amber and red.
- Ask for help without giving a pupil away.

Remember

- Your words travel: to servers, histories, reviewers, maybe training.
- The noticeboard test: if it can't go on the board, it can't go in the chatbot.
- Share the situation, not the child.

Green, amber, red

1. Warm-up (5 min): Which apps do you type into? What do they know?
2. Teach (8 min): Where typed words go; the noticeboard test.
3. Green, amber, red (15 min): Groups hold up a card for ten items.
4. Fix it (7 min): Rewrite two red items so they are safe.
5. Wrap-up (5 min): Agree a class rule, then the exit ticket.

Prepare ten items, from harmless (“a story about a lion”, “my favourite colour”) to red (“my password”, “my home address”, “my friend's photo”). Cards can be squares of paper coloured with pencils.

Let’s discuss

1. Why might an app keep what you type?
2. Which item was the hardest to sort, and why?
3. How can you get help without saying who it is about?

Exit ticket

- Write one red thing you will never type into an app, and a safe way to ask for help instead.
