# Python for teachers: review

## Programming · Level 2 · Unit check

# In this unit

- First programs
- Decisions
- Loops
- Lists

# The big ideas

- Python runs one line at a time; = stores and == compares
- Only the first true branch runs: test the boundaries
- range(a, b) stops before b; a loop can build a total
- Lists count from 0; len, sum, max and min do the work

# Team quiz

1. Make teams of four
2. Read each question aloud; teams agree on one answer
3. Reveal the answer and ask one team to explain why
4. Write the hardest question on the board for tomorrow

# Let’s discuss

1. Which program will you write first for your own work?
2. Which question surprised you, and why?
3. Which idea will your pupils find hardest?

# Exit ticket

- One job I will hand to Python this month, and how
