Final project: a small program that solves a real problem

Functions, lists and algorithms: final project

The challenge

- A marks report: average, top three, who improved
- A weather week: hottest day, sorted readings
- A price finder: cheapest shop for each item

Your milestones

- Functions: one job each
- Lists and loops
- Searching
- Sorting, and judging algorithms

Build it

1. Pick an idea and write the plan
2. Reuse your milestone work
3. Test it: where does it work, where does it fail?
4. Explain it to a partner in your own words

Let's discuss

1. What would change if one part of your project changed?
2. Where did it fail, and what did you change?
3. What would you build next?

Before you go

- One thing I understand now that I didn't before this project.
