Social engineering: hacking people

Cyber security · Level 3 · Lesson 2

Time	Materials
20 min	Paper or a card, and coloured pens; A few real scam messages you've seen (names removed)

Learning goals

- Explain what social engineering is and why it works.
- Name the five tricks in calls, messages, game chats and in person.
- Respond safely: pause, check through another channel, say no.

Activity: Trick spotting

1. Collect (4 min): Write down three scam messages or calls you, your friends or your family have received or heard about. Leave out names and numbers.
2. Spot (6 min): Next to each one, name every trick it uses: authority, urgency, fear, a gift or curiosity. Most use more than one.
3. Rewrite (6 min): For each one, write the best reply, or no reply, and the other channel you would use to check.
4. Teach (4 min): Explain one example to someone at home, and ask whether they have ever received one like it.

Work with real examples, but never call back a scam number or reply to a scam message, even as a joke.

Discussion

- Why do attackers try to make you feel rushed or scared?
- How can you check a call without using the number it came from?
- When is it hard to say no, and how can you make it easier?

Check yourself

- One trick + the words I'll use to say no to it.

Try it this week

Tell someone at home about the five tricks (authority, urgency, fear, a gift, curiosity), and agree on one family rule: nobody shares a password or a code, whoever asks. If a call feels wrong, hang up and call back on a number you already know.
