Final project: a safety plan for a real family or club

How attacks work, and how to defend: final project

The challenge

- A family phone check-up and a scam-spotting card
- A team account plan: passwords and two-step sign-in
- A club poster that teaches one cipher and one rule

Your milestones

- Malware: how it gets in
- Social engineering: hacking people
- Attacks on passwords, and the defences
- Secret messages: encryption basics

Build it

1. Pick an idea and write the plan
2. Reuse your milestone work
3. Test it: where does it work, where does it fail?
4. Explain it to a partner in your own words

Let's discuss

1. What would change if one part of your project changed?
2. Where did it fail, and what did you change?
3. What would you build next?

Before you go

- One thing I understand now that I didn't before this project.
