Who may see what

Data engineering · Level 4 · Lesson 3

Today we will

- Give each role only the data it needs.
- Share summaries, and hide groups under five.
- See how harmless facts can identify a child.

Remember

- Least privilege: each role, only what it needs.
- Groups of fewer than five stay hidden.
- Numbers instead of names is a start, not the end.

Guess who

1. Warm-up (5 min): Who sees our marks?
2. Teach (8 min): Roles, summaries and small groups.
3. Play (10 min): Guess who.
4. Decide (12 min): Our access table.
5. Wrap-up (5 min): What would we never send out?

Make the “Guess who” pupil entirely made up, and choose facts that don’t describe a real pupil in your school. Keep the discussion of special needs general.

Let’s discuss

1. After how many facts could we tell who she was?
2. Why hide groups of fewer than five?
3. What should we ask before data leaves the school?

Exit ticket

- Write one record, the roles that may see it, and whether each sees it in full or as a summary.
