Distributions and histograms

Data science · Level 2 · Lesson 1

Today we will

- Build a histogram with equal bins.
- Read symmetric and skewed shapes.
- Choose a middle that fits the shape.

Remember

- Bars count values in equal bins.
- Skewed right: the mean sits above the median.
- The bin width can hide the shape.

A sticky-note histogram

1. Warm-up (5 min): What can you see in a list?
2. Teach (8 min): Bins, bars and shapes.
3. Build (15 min): Measure and stick.
4. Describe (7 min): Name the shape.
5. Wrap-up (5 min): What did we find out?

Let’s discuss

1. Why must the bins be equal?
2. What did wider bins hide?
3. Which school data might have two hills?

Exit ticket

- Sketch a skewed-right histogram and mark roughly where the mean and the median are.
