Final project: predict something and prove how good it is

Predict with data: final project

The challenge

- Predict shoe size from height in your class (with permission)
- Predict tomorrow's rain from today's sky
- Predict a plant's growth from hours of sun

Your milestones

- Fitting a line
- Training and testing
- Nearest neighbours
- How good is my model?

Build it

1. Pick an idea and write the plan
2. Reuse your milestone work
3. Test it: where does it work, where does it fail?
4. Explain it to a partner in your own words

Let's discuss

1. What would change if one part of your project changed?
2. Where did it fail, and what did you change?
3. What would you build next?

Before you go

- One thing I understand now that I didn't before this project.
