Matching teachers and classes

Optimization · Level 3 · Lesson 4

Today we will

- Write an assignment as yes-or-no choices, one per row and column.
- Find the best total, and the plan with the best worst match.
- Ask who wrote the scores, and decide the rule together.

Remember

- Choosing in turn can lose a lot: 29 against 39 in the lab.
- One yes-or-no variable per pair; exactly one per row and per column.
- Judge twice: the total and the worst match, and check the scores with the people.

Fair class jobs

1. Warm-up (5 min): How are class jobs shared now?
2. Score (8 min): Five volunteers score five jobs.
3. In turn (7 min): Choose in turn; add the total.
4. Better plans (15 min): Best total, then best worst match.
5. Wrap-up (5 min): Vote on the rule and explain it.

Keep it to five volunteers and five jobs so the table fits the board. Scores of 1 to 5 keep the sums easy.

Let’s discuss

1. Why did choosing in turn give a lower total?
2. Which plan was best for the person with the lowest score?
3. Who should write the scores, and who should see them?

Exit ticket

- Write one rule for sharing class jobs fairly, and what it might cost.
