Teaching decisions: review

Optimization · Level 4 · Unit check

In this unit

- Two goals at once
- Fair by design
- When the model is wrong
- Big problems, good answers

The big ideas

- Keep the plans nobody beats; agree weights openly
- Put fairness in the model: floors, worst-off, gaps
- Test answers with people; write assumptions down
- Decide what good enough means; keep people in charge

Decision clinic

1. Warm-up (5 min): Name a decision you'd like to fix.
2. Quiz (15 min): Teams answer the unit questions.
3. Clinic (15 min): Apply the four ideas to one decision.
4. Share (5 min): One change each team will make.

Works as a staff training session as well as a class review: use real school decisions, and keep names out of the examples.

Let’s discuss

1. Which idea from this unit will you use first?
2. Where does our school hide a trade-off inside a single number?
3. Who should be in the room when a fairness rule is chosen?

Exit ticket

- One decision I will lead differently, and the first step I will take.
