Lesson plan · for the teacher

From chatbot to agent

AI agents · Level 1 · Lesson 1

Time
40 min

Materials
Paper slips and pens; The class timetable on the board (or a weather chart); Three signs: Model, Tool, App

Learning goals

- Tell a chatbot from an agent.
- Act out the agent loop: request, plan, call, result, answer.
- Check that an answer came from a tool's result.

Activity: Human agent

1. Warm-up (5 min): Ask who has asked a phone to set an alarm or find a route. Ask: did the phone just talk, or did it do something?
2. Teach (8 min): Draw five boxes on the board: request, plan, tool call, result, answer. Explain that the model writes the plan, the call and the answer, and the app runs the tool and adds the result.
3. Human agent (15 min): Three pupils wear signs: Model, Tool, App. The class gives a request about the timetable on the board. The Model writes a plan and a call on a slip, the App carries it to the Tool, the Tool writes the result from the board, and the Model answers aloud. Play three rounds with new pupils; in one, let the Model answer without calling the tool.
4. Check it (7 min): For each round, the class checks the slip: did the answer match the result? In the round with no tool call, ask what went wrong and why.
5. Wrap-up (5 min): Read out three things (a chatbot writing a poem, a phone setting an alarm, a map checking traffic). The class says "chatbot" or "agent". Then give the exit ticket.

Prepare the class timetable on the board, three signs (Model, Tool, App) and a pile of paper slips. No phones are needed.

Discussion

- Where have you met an agent outside school?
- Why does it matter that the app, not the model, runs the tools?
- What job at school would you give an agent first, and what would you check?

Exit ticket

- Draw the agent loop as five boxes, and write who does each step: the model or the app.

Try it in class tomorrow
Play "Human agent": one pupil is the model and writes a plan and a tool call on a slip, another is the timetable tool and answers from the board, and a third is the app that carries the slips. The class checks: did the answer come from the tool's result?

Worksheet · for pupils

From chatbot to agent

AI agents · Level 1 · Lesson 1

Name _____ Class _____ Date _____

1 **A chatbot made up a timetable. What would turn it into an agent that checks?**

- ◯ A friendlier, more confident voice
- ◯ A timetable tool it can call, run by the app
- ◯ Longer, more detailed answers

2 **Which of these are agents, using a tool to get something done? Choose all that apply.**

- ☐ A phone assistant that sets an alarm when you ask
- ☐ A chatbot with no tools that writes a poem
- ☐ A map app that finds a route, then checks the traffic
- ☐ A calculator adding up marks
- ☐ A chatbot that searches the web before it answers

3 **Put the agent loop in order, for "What's the weather in Kafi tomorrow?".**

- ☐ The answer: "Tomorrow in Kafi: sunny…"
- ☐ The result from the app: sunny, 35°C, 10% rain
- ☐ The tool call: weather, place Kafi, day tomorrow
- ☐ The plan: "I'll check the weather."
- ☐ The request: weather in Kafi tomorrow

4 **Match each part of the loop to what Darsi Tiny wrote or got.**

Plan	• • • •	"Tomorrow in Kafi: sunny, high 35°C…"
Tool call	• • • •	Sunny, high 35°C, 10% chance of rain
Result	• • • •	weather, with the place Kafi and the day tomorrow
Answer	• • • •	"I'll check the weather."

5 **In an agent, the language model runs the tools itself.**

- ◯ True
- ◯ False

✎ **Think of a job at your school that an agent could help with. Which tools would it need, and what would you want to check before trusting it?**
