When to trust an agent

AI agents · Level 1 · Lesson 3

Today we will

- Explain why an agent can sound sure and still be wrong.
- Check an agent’s call, details and result, not just its answer.
- Match trust to the stakes: green, amber, red.

Remember

- Sounding sure is not proof: with new wordings, Darsi Tiny is right about four times in five.
- Check the call, the details and the result; the answer must match the result.
- Look-ups need a quick check, actions need approval, decisions about children need a person.

Spot the slip

1. Warm-up (5 min): A confident wrong answer you have heard.
2. Teach (8 min): Three slips, and the four checks.
3. Spot the slip (15 min): Groups check three agent conversations.
4. Traffic lights (7 min): Green, amber or red for each job.
5. Wrap-up (5 min): Sure is not proof. Exit ticket.

Write the three conversations before class: one correct, one with a name copied wrongly in the call, one whose answer doesn't match its result. Use made-up names only.

Let’s discuss

1. Why does an agent never say “I’m not sure”?
2. Which jobs at school would you rate red, and why?
3. How would you teach pupils to check a helper’s answer?

Exit ticket

- Name the four checks, and one job you would rate red.
