A task in steps

AI agents · Level 2 · Lesson 1

Today we will

- Break a school job into steps, each with a tool.
- Show how one step’s result feeds the next.
- Put a check after each step, and before any action.

Remember

- An agent plans the steps, then calls one tool after another.
- One step’s result feeds the next, and so do its mistakes.
- A failed step can still lead to an action: check after each step.

Plan the trip

1. Warm-up (5 min): What steps does a class trip need?
2. Teach (8 min): Plans, results and the Saturday reminder.
3. Plan the trip (15 min): Groups put tool steps on cards.
4. Check it (7 min): Swap plans and find a missing check.
5. Wrap-up (5 min): What if a step fails? Then the exit ticket.

Prepare index cards, pens and three real events to choose from. Write the tool names on the board: route, weather, timetable, reminder, message. No phones are needed.

Let’s discuss

1. Which step in your plan would hurt most if it failed?
2. Why does Darsi Tiny still set the Saturday reminder?
3. Which school jobs should never run without a person checking?

Exit ticket

- Write a two-step school job, the tool for each step, and where you would check.
