How agents work: the loop, tools and memory: review

AI agents · Level 3 · Unit check

In this unit

- Inside the loop
- How it picks a tool
- Memory: the context window
- Teaching it a new tool

The big ideas

- It’s all one text: the model writes plans, calls and answers; the app adds results
- The model picks a tool from the tools line and your words, and copies details, with slips
- The context window is its only memory: what falls out is gone
- Fine-tuning teaches new skills but can make it forget: test old and new

Team quiz

1. Make teams of four
2. Read each question aloud; teams agree on one answer
3. Reveal the answer and ask one team to explain why
4. Write the hardest question on the board for tomorrow

Let’s discuss

1. Which idea will you use first with your class?
2. Which of Darsi Tiny’s mistakes surprised you most?
3. What would you check before trusting an agent at school?

Exit ticket

- One thing I now understand about how agents work, and how I'll explain it to my pupils
