Inside an agent

AI agents · Lower secondary · Lesson 1

In this lesson you will

- Describe the agent loop.
- Read a tool call: its name and its details.
- Put a short Python loop in order.

Key ideas

- An agent is a language model in a loop with tools.
- A tool call is a tool’s name plus its details.
- The model writes; the app runs the tools, and can check first.

Be the agent

1. Warm-up (3 min): Talk, or act? Sort five apps.
2. Write (7 min): Turn three requests into tool calls.
3. Play (7 min): One of you is the model, one the tool.
4. Check (3 min): Did each answer come from the result?

You only need paper, a pen, and a timetable or a weather forecast. No phone is needed.

Let’s discuss

1. Which apps on your phone are agents, and which only talk?
2. Why is it useful that the app, not the model, runs the tools?
3. What would you want to check before an agent acts for you?

Exit ticket

- Write one tool call for a request of your own: the tool’s name and its details.
