Lesson notes · for you

Check what it did

AI agents · Lower secondary · Lesson 2

Time
20 min

Materials
Paper cards or slips, and a pen; Five made-up requests, written out (for example: “Remind me to feed the goats at 6:00”); A friend or family member to play the agent

Learning goals

- Explain why an agent can be wrong and still sound sure.
- Check a call against the request, name by name.
- Use simple rules to stop slips before anything runs.

Activity: The checker game

1. Warm-up (3 min): Without looking, write the five rules: tool on, right shape, names from you or a result, no failed step before, a person says yes to actions.
2. Write (7 min): Write five requests on cards and a call for each. Hide a slip in two of the calls: a name changed, a time like 25:00 or a wrong day.
3. Check (7 min): Swap cards with a partner. For each call, write “pass” or “stop”, and the rule that stops it.
4. Share (3 min): Check each other’s answers. Which slip did nobody spot, and which rule would have caught it?

Use only made-up names and requests. Paper and a pen are enough.

Discussion

- Why can’t an agent tell you when it’s wrong?
- Which of the five rules would you trust most, and why?
- When should a person check, even if the rules pass?

Check yourself

- Write one slip an agent might make, and the rule that would stop it.

Try it this week
Next time an app or an agent does something for you, check what it actually did: the day, the time, the names. Write down one slip you find, and the rule that would have caught it.

Worksheet

Check what it did

AI agents · Lower secondary · Lesson 2

Name _____ Class _____ Date _____

1 **Darsi Tiny wants to set a reminder for 25:00. Which rule stops it?**

- ◯ The tool must be switched on
- ◯ Every detail needs the right shape
- ◯ No earlier step may have failed

2 **This program prints True.**

```
request = "What does 9Z have tomorrow?"
print("9C" in request)
```

- ◯ True
- ◯ False

3 **Which of these should stop a call before it runs? Choose all that apply.**

- ☐ A name in the call that isn't in your request or any result
- ☐ A reminder for 25:00
- ☐ The step before it failed ("no school")
- ☐ The weather tool for a weather question
- ☐ The agent sounds very confident

4 **Complete the check: stop if the detail isn't in the request, otherwise say OK.**

```
request = "What does 9Z have tomorrow?"
detail = "9C"
if detail _________ in request:
    _________("Stop:", detail)
else:
    print("OK")
```

Word bank: `input` `and` `print` `not`

5 **Match each slip to the checker's rule that stops it.**

9Z became 9C	• • • •	A person says yes to any action
A reminder for 25:00	• • • •	No step before it failed
A reminder after "no school"	• • • •	Every detail has the right shape
A message sent without asking	• • • •	Every name comes from your words or a result

When did an app, a website or a person sound very sure and turn out to be wrong? What would have helped you check?
