Your data, your bundle

AI agents · Lower secondary · Lesson 4

In this lesson you will

- Compare a model on your phone with one in the cloud.
- Work out a month’s data with a short program.
- Decide what you will never type into a cloud agent.

Key ideas

- Cloud agents cost data, money and a signal, and your words leave your phone.
- Small models on the phone are cheap, private and offline, but know little.
- Never type passwords, your address or other people’s private things.

Phone or cloud?

1. Warm-up (3 min): How much data does your phone use a month?
2. Work it out (6 min): A month of cloud requests.
3. Sort (8 min): Ten questions: phone, cloud or never?
4. Rules (3 min): Write your own three rules.

A phone helps but isn’t needed: the sums and the sorting work on paper. Never use anyone’s real private details as examples.

Let’s discuss

1. When is a big cloud model worth its cost?
2. Why might a free AI app still cost you something?
3. What would you tell a younger student about typing into chatbots?

Exit ticket

- Write one question you’d ask on the phone, one in the cloud, and one thing you’d never type.
