Read a tool call

AI agents · Upper secondary · Lesson 1

In this lesson you will

- Tell a plan, a tool call and an answer apart.
- Split a call into its name and details in Python.
- Handle a broken call without crashing.

Key ideas

- The model only writes text: a plan, a call or an answer.
- Split a call at its first curly bracket; json.loads reads the details.
- Catch broken calls with try and except.

Activity: Call, answer or broken?

1. Warm-up (3 min): Read Darsi Tiny’s call for the weather in Kafi.
2. Write (7 min): Five model lines: calls, answers, one broken.
3. Swap (5 min): Mark each line and name each tool.
4. Code (5 min): Run parse_call on your lines.

Use only made-up places and people, such as Kafi, Dala and class 6B. You can do the first three parts with paper only.

Let’s discuss

1. Why does the model never run a tool itself?
2. What should an agent do with a broken call?
3. Which details would you check after json.loads?

Exit ticket

- Write one tool call, one answer and one broken call, and label each.
