Map your school's AI risks

AI security · Level 4 · Lesson 1

Today we will

- List the AI tools in use, with their data and their powers.
- Find the paths for untrusted text, and score each risk.
- Give the top risks a control and an owner.

Remember

- List every tool: data, powers, users, owner.
- Untrusted text can carry a hidden order or a mistake.
- Risk = likelihood × impact; tools that act come first.

A risk map in an hour

1. Warm-up (5 min): Guess how many AI tools the school uses.
2. Inventory (15 min): List tools, data, powers, users and owners.
3. Paths in (10 min): Mark where untrusted text gets in.
4. Score (15 min): Likelihood × impact; circle the top three.
5. Owners (10 min): A control, a name and a date for each.

Ask around before the session: staff and pupils often use tools nobody has listed. Keep the names of pupils and staff off the sheet. If the school has a cyber risk register, bring it and add the AI rows.

Let’s discuss

1. Which tool surprised you by being on the list?
2. Why do tools that act need the hardest look?
3. What makes a control stronger than a piece of advice?

Exit ticket

- Write your school's top AI risk, its score, and who will own it.
