AI makes guesses

AI security · Primary school · Lesson 1

In this lesson you will

- Explain that AI learns from examples and makes guesses.
- Say why a sure answer can still be wrong.
- Check an answer with a book or a grown-up.

Remember

- AI learns from lots of examples, then guesses.
- Sounding sure is not the same as being right.
- Health, safety, homework facts: always check.

Activity: Robot or right?

1. Warm-up (3 min): Name an app or a toy that talks to you.
2. Write (7 min): Write five facts: three true, two made up.
3. Play (7 min): Read them in a sure robot voice; others guess.
4. Check (3 min): Check every fact in your book.

No device needed. Use your school book to check the facts.

Let’s discuss

1. Why can a computer that learned from examples still be wrong?
2. Which answers should you always check?
3. Who can help you check at home?

Check yourself

- Write one answer you would always check, and how you would check it.
