Wrong examples, wrong answers

AI security · Primary school · Lesson 2

In this lesson you will

- Explain how AI learns from examples with labels.
- Show what wrong labels do to an AI.
- Find and fix the odd ones out.

Remember

- Labels are the AI's teacher.
- Wrong labels teach wrong answers, by accident or on purpose.
- Look for odd ones out, and tell a grown-up.

Activity: Teach the sorter

1. Make (5 min): Draw ten fruit cards and label them.
2. Teach (5 min): Show a friend the cards; they sort new ones.
3. Trick (5 min): Secretly write two wrong labels, then play again.
4. Find (5 min): Look for the odd ones out and fix them.

No cards? Use real leaves of two kinds, or stones of two colours.

Let’s discuss

1. Why can't a computer tell when a label is wrong?
2. Why might someone add wrong examples on purpose?
3. How can you help keep examples right?

Check yourself

- Explain in one sentence why wrong labels make wrong answers.
