Decisions and debugging

Programming · Level 1 · Lesson 3

Today we will

- Write decisions as IF … THEN … ELSE, with AND and OR.
- Debug with a routine.
- Treat bugs as normal, for pupils and for you.

Remember

- AND: both must be true. OR: one is enough.
- Find the first step that goes wrong.
- Change one thing, then test again.

Simon says IF

1. Warm-up (5 min): Simon says IF … THEN … ELSE.
2. Teach (10 min): AND, OR, and the debugging routine.
3. Swap and debug (15 min): Pairs hide a bug; another pair finds it.
4. Share (5 min): How did you find it?
5. Wrap-up (5 min): Bugs are normal. Exit ticket.

Make a mistake on purpose early in the lesson and debug it out loud: pupils copy how you treat bugs.

Let’s discuss

1. Why start from the first step that goes wrong?
2. What is the difference between AND and OR in a school rule?
3. How can we make bugs feel normal in our class?

Exit ticket

- Write one rule with AND and one with OR from our school day.
