Data all around the school

Data engineering · Level 1 · Lesson 1

Today we will

- Say what data is, and find it in our school.
- Read a table: rows, columns and cells.
- Build a tidy table of our class, and count from it.

Remember

- Data are facts we record.
- A table: one row per thing, one column per fact.
- One value per cell; no totals inside the data.

Our class in a table

1. Warm-up (5 min): What does our school write down every day?
2. Teach (8 min): Rows, columns and cells.
3. Build (15 min): Our class table, by pupil number.
4. Count (7 min): How many walk? Who takes over 30 minutes?
5. Wrap-up (5 min): Why was it easy to count?

Give each pupil a number before the lesson, and keep the list of numbers and names to yourself. If some pupils don’t know their minutes, accept “about” values and say so on the table.

Let’s discuss

1. Which data does our school keep that nobody ever counts?
2. Why did we use numbers instead of names in our table?
3. What went wrong when the table had a Total row in it?

Exit ticket

- Draw a tiny table with two rows and two columns about anything you like, and label a row, a column and a cell.
