Databases and SQL for school records: review

Data engineering · Level 3 · Unit check

In this unit

- From sheets to a database
- Asking questions: SELECT, WHERE, ORDER BY
- Counts and averages: GROUP BY
- Joining tables for reports

The big ideas

- Store each fact once; keys link tables
- SELECT columns, WHERE rows; check the answer
- GROUP BY one row per group; NULL is skipped
- Left joins keep everyone; reports show only what’s needed

Team quiz

1. Teams (2 min): Make teams of four.
2. Quiz (20 min): Read each question; teams agree on one answer.
3. Explain (10 min): One team explains each answer.
4. Wrap-up (8 min): The hardest question goes on the board.

Let’s discuss

1. Which school record would you move into a database first?
2. Which query would save you the most time?
3. Who reads your reports, and what do they need?

Exit ticket

- One query I will write this week, and who will read its answer.
