Spreadsheets and clean data: review

Data engineering · Level 2 · Unit check

In this unit

- Cells, rows and formulas
- Messy names, wrong counts
- Blanks, repeats and impossible values
- Summaries that tell the truth

The big ideas

- Formulas work on ranges and update themselves
- Computers compare text exactly: clean it first
- A blank is not a zero
- Extreme values drag the mean, not the median

Team quiz

1. Teams (2 min): Make teams of four.
2. Quiz (15 min): Read each question; teams agree on one answer.
3. Explain (8 min): One team explains each answer.

Let’s discuss

1. Which cleaning step do you think matters most?
2. Where could you use a median instead of a mean?
3. What would you check before trusting a table?

Exit ticket

- One thing I’ll check before I trust a number, and why.
