Data engineering: review

Data engineering · Level 4 · Unit check

In this unit

- Schemas and formats
- ETL with Python and SQL
- Data quality and contracts
- Batch and stream

The big ideas

- Normalise for apps, star for reports; the format is the price
- Every load must be safe to rerun
- Test against the contract; block, quarantine or alert
- Choose batch or stream by what late and false cost

Team quiz

1. Teams (2 min): Make teams of four.
2. Quiz (15 min): Read each question; teams agree on one answer.
3. Explain (8 min): One team explains each answer.

Let’s discuss

1. Which part of a pipeline fails most often, and why?
2. What would you put in a contract for data you depend on?
3. Which system you use should be a stream, and isn’t?

Exit ticket

- One design decision I’d now make differently, and why.
