Models with numbers: review

Optimization · Level 2 · Unit check

In this unit

- From words to a model
- The best plan is at a corner
- Whole numbers and yes-or-no choices
- Your first model in Python

The big ideas

- Variables, constraints and an objective make a model
- The best plan of a linear program is at a corner
- Whole numbers need a real search, not rounding
- A solver obeys only the rules you write: check, and ask people

Team quiz

1. Teams (3 min): Make teams of four.
2. Quiz (15 min): Teams agree an answer to each question.
3. Explain (7 min): One team explains each answer.
4. Model it (10 min): Each team writes one school decision as a model.
5. Wrap-up (5 min): The hardest question goes on the board.

Let’s discuss

1. Which idea from this unit will you use first in class?
2. Where could rounding mislead us at school?
3. Who should help write the rules of a school model?

Exit ticket

- One decision I will model with my class, and its objective.
