Goals and limits: review

Optimization · Level 2 · Unit check

In this unit

- Choices, limits and a goal
- Draw the plans that fit
- Whole numbers only
- Tell the computer

The big ideas

- Variables, limits and a goal make a model
- The best plan of a linear program is at a corner
- Whole numbers need a search; quick rules can miss
- A solver keeps only the rules you write, fairness too

Activity: Model swap

1. Recall (3 min): One idea from each lesson.
2. Write (7 min): A model for a choice you make.
3. Swap (7 min): Check a partner’s model and plans.
4. Share (3 min): The best rule someone added.

Let’s discuss

1. Which idea from this unit surprised you most?
2. When is the cheapest or biggest plan not the best one?
3. How would you explain a model to a younger student?

Exit ticket

- One model I could write this week, and its goal.
