Data in class: record, chart, decide

IoT · Level 1 · Lesson 4

Today we will

- Record a week of rain readings in a table with units.
- Draw a bar chart with equal steps and labelled axes.
- Spot a pattern and use a class rule to make a decision.

Record, chart, spot, decide

- Record it in a table
- Draw a bar chart
- Spot the pattern
- Decide and act

Our class rainfall chart: Chart

1. Warm-up (5 min): Ask: “When should we water the school garden?” Collect answers — every day?
2. Record (7 min): Pupils copy the table — Day, Time, Rain (mm) — and fill it from the class gauge log or the sample data.
3. Chart (13 min): Draw the axes together: days along the bottom, “Rain (mm)” up the side in equal steps of 2.
4. Decide (10 min): Ask pairs to name one pattern.
5. Wrap-up (5 min): Explain that connected devices can do these steps automatically with sensors and rules.

Draw the empty table and chart axes on the board. Sample data if you have no gauge yet (8 am readings, made up for practice): Mon 14 mm, Tue 9, Wed 0, Thu 0, Fri 0, Sat 0, Sun 2.

Let’s discuss

1. Why not leave it blank?
2. What does the chart tell us?
3. Does our rule say water today, or wait?

Exit ticket

- The four data steps in order, and our decision today.
