Circuits and microcontrollers: review

IoT · Level 2 · Unit check

In this unit

- Current, LEDs and resistors
- Logic: switches that decide
- Bits and bytes
- Microcontrollers: sense, decide, act

The big ideas

- Current needs a closed loop; an LED needs a resistor
- AND, OR and NOT build every rule
- Bits store every number, letter and reading
- Read, decide, act, wait: the microcontroller's loop

Team quiz

1. Make teams of four
2. Read each question aloud; teams agree on one answer
3. Reveal the answer and ask one team to explain why
4. Write the hardest question on the board for tomorrow

Let’s discuss

1. Which idea will you use first?
2. Which question surprised you, and why?
3. What will your pupils build or measure first?

Exit ticket

- One idea I will use, and when I will use it
