Start from a problem

IoT · Level 4 · Lesson 1

Today we will

- Turn a school problem into a measurable question and a success measure.
- Choose sensors, power and network by weighing needs, cost and upkeep with the people affected.
- Write a one-page project plan with roles for pupils.

Problem first

- Start from a problem people feel
- Ask a question a sensor can answer
- Success: a number and a date
- Agree the weights with those affected

Problem hunt

1. Warm-up (5 min): The box of sensors in a cupboard. Why?
2. Teach (8 min): From problem to question to success measure.
3. Hunt (10 min): Groups list three problems, who they hurt, what to measure.
4. Vote (5 min): Each group pitches one; the class votes.
5. Plan (12 min): Draft the one-page plan together on the board.

Before class, ask the caretaker or a cleaner which school problem they would fix first: their answer makes a good example. Keep the hunt to problems, not complaints about people, and use no names.

Let’s discuss

1. Which problem did your pupils choose, and who does it hurt most?
2. What could you measure first with no sensor at all?
3. Who outside the class must agree before you build anything?

Exit ticket

- Write one measurable question and one success measure for a school problem.
