Data ethics: fair, safe and honest

IoT · Level 4 · Lesson 4

Today we will

- Decide what data a project really needs, and what it could reveal about people.
- Plan consent, access and how long data is kept, with extra care for children.
- Share results honestly with the school community, uncertainty included.

Fair, safe, honest

- Collect only what you need
- Tell, ask and explain
- Limit who sees it, and for how long
- Report honestly, uncertainty included

Data audit

1. Warm-up (5 min): The CO_2 data that showed an empty room.
2. Teach (8 min): Collect less, tell and ask, who sees it, honest reports.
3. Audit (12 min): Groups fill the four-column table for each piece of data.
4. Cut (5 min): Cross out what the question doesn't need.
5. Notice (10 min): Write a five-line notice for families.

Use a planned or made-up project, never real pupils' data. Keep the discussion about practices, not colleagues: no names.

Let’s discuss

1. What surprised you about what sensor data can reveal?
2. Who should decide when project data is used for something new?
3. How would you report a result you're only half sure of?

Exit ticket

- Rewrite this claim honestly: “Room 6 has the worst air in the school.”
