From chatbot to agent

AI agents · Level 1 · Lesson 1

Today we will

- Tell a chatbot from an agent.
- Act out the agent loop: request, plan, call, result, answer.
- Check that an answer came from a tool’s result.

Remember

- A chatbot writes text; an agent uses tools to act.
- The loop: request, plan, tool call, result, answer.
- The model writes; the app runs the tools, so the app can check first.

Human agent

1. Warm-up (5 min): Who has asked a phone to set an alarm?
2. Teach (8 min): The agent loop, in five boxes.
3. Human agent (15 min): Model, Tool and App play three rounds.
4. Check it (7 min): Did each answer come from the result?
5. Wrap-up (5 min): Chatbot or agent? Then the exit ticket.

Prepare the class timetable on the board, three signs (Model, Tool, App) and a pile of paper slips. No phones are needed.

Let’s discuss

1. Where have you met an agent outside school?
2. Why does it matter that the app, not the model, runs the tools?
3. What job at school would you give an agent first, and what would you check?

Exit ticket

- Draw the agent loop as five boxes, and write who does each step: the model or the app.
