Teaching it a new tool

AI agents · Level 3 · Lesson 4

Today we will

- Explain fine-tuning: learning from examples.
- Explain forgetting, and why mixing old examples in helps.
- Decide when to fine-tune, and how to test the result.

Remember

- Fine-tuning shifts a model’s numbers from examples (16 examples, 15 steps on the phone).
- New examples alone made it forget: old skills fell from 8 of 8 to 1; with 48 old ones mixed in, 8 of 8.
- Try instructions and tools first; fine-tune with a test of old and new.

Old and new

1. Warm-up (5 min): Show the class signals they already know.
2. Teach (8 min): Fine-tuning, forgetting and mixing old in.
3. Round one (10 min): Teach a new signal alone, then test all.
4. Compare (10 min): Tally old and new on the board.
5. Wrap-up (7 min): Plan round two with practice mixed in; exit ticket.

No phones needed: just signals the class knows, one new signal and a tally on the board. If you have a phone, run the teach lab before class to see the real numbers yourself.

Let’s discuss

1. When have you learned something new and forgotten something old?
2. What would you test before letting pupils use a fine-tuned agent?
3. Why might a tool be better than fine-tuning for our school’s room codes?

Exit ticket

- Name one thing fine-tuning can break, and how you would check for it.
