Spot the AI around you

AI · Level 1 · Lesson 1

Today we will

- Say what AI is in our own words.
- Sort everyday tools into “learns from examples” and “follows a rule”, and explain why.
- Give one example of AI from our own lives.

Remember

- Some machines only follow fixed steps a person wrote. They do the same thing every time and never learn.
- AI learns patterns from many examples, then makes predictions — best guesses — or decisions.
- You already use AI every day: keyboard suggestions, voice typing and spam filters.

Learns or follows a rule?: Sort it

1. Warm-up (5 min): Ask how a new pupil learns everyone's names.
2. Teach (8 min): Draw a solar lamp and a clock: "6 pm → on".
3. Sort it (12 min): Hold up or call out each card.
4. Pair talk (8 min): Pairs think of one more thing at home, at school or in the market that might use AI.
5. Wrap-up (7 min): Exit ticket: each pupil writes or says one sentence starting "AI is…" and one example.

Draw two large boxes on the board and label them "Learns from examples" and "Follows a rule". Prepare 8 cards: calculator, voice typing, school bell, spam filter, solar lamp timer, phone keyboard, flood alert, traffic light.

Let’s discuss

1. Did someone give you a rule for every face, or did you learn by seeing people many times?
2. Why do you think so?
3. What examples would it need to learn from?

Exit ticket

- AI is… (one sentence) + one example from my life.
