Lesson plan · for the teacher

Generate, then check

AI · Level 2 · Lesson 3

Time
40 min

Materials
A one-page worksheet made with AI, with three to five mistakes you planted (one copy per pair, or copied onto the board); The textbook (one per pair or group, or the page copied on the board); Pencils; Your answer key

Learning goals

- Find mistakes in a worksheet by checking the textbook.
- Give evidence for every mistake we find.
- Spot examples that don't fit our lives, and improve them.

Activity: Find the mistakes

1. Warm-up (5 min): Read aloud one confident, wrong sentence from the AI worksheet, for example "The Nile flows into the Atlantic Ocean." Ask: does it sound right? How can we find out? Check it together in the textbook or an atlas.
2. Teach (7 min): Write the four checks on the board: facts (is it true?), level (are the words right for us?), bias (who is in it, and who is missing?), local fit (is it from our lives?). Give one quick example of each.
3. Find the mistakes (15 min): Hand out the worksheet, one per pair. Pairs check every line against the textbook, circle each mistake and write the page number that proves it, or a better word or example.
4. Evidence (8 min): Pairs report one mistake each, with their evidence. Tick each one on your answer key. Give points for evidence, not for speed.
5. Wrap-up (5 min): Rewrite one foreign or biased example together so that it fits your pupils' lives. Ask: who should check what a machine writes? Then give the exit ticket.

Before class, make a one-page worksheet with AI, check it, then plant three to five mistakes: a wrong fact, a word too hard for the class, a stereotype, a foreign example. Keep your answer key. Make one copy per pair, or copy the worksheet onto the board.

Discussion

- Which mistake was hardest to find, and why?
- Why is evidence better than speed?
- Who should check what a machine writes before pupils use it?

Exit ticket

- Write one mistake you found and the page that proves it.

Try it in class tomorrow
Play "Find the mistakes": Give pairs a worksheet an AI made, with a few mistakes you planted. They check it against the textbook and circle every error. The pair with the best evidence wins, not the

fastest.

Worksheet · for pupils

Generate, then check

AI · Level 2 · Lesson 3

Name _____ Class _____ Date _____

1 **An AI drafted Amina's worksheet, and a mistake reached her pupils. Whose responsibility is it?**

◯ The AI company's ◯ Amina's: she is the teacher who used it ◯ Nobody's: AI makes mistakes

2 **Match each problem in an AI-made worksheet to the check that catches it.**

"The Nile flows into the Atlantic Ocean."	• • • •	Local fit
"Electromagnetic radiation" in a Primary 4 text	• • • •	Bias
Every farmer in the stories is a man	• • • •	Level
A maths problem about buying snow boots	• • • •	Facts

3 **A chatbot answers only from a textbook page you gave it. What could still go wrong? Choose all that apply.**

☐ It misreads the page ☐ It mixes in things it learned elsewhere

☐ The page itself is out of date ☐ It can no longer say "I don't know"

4 **Put the habit in order, from an AI draft to the classroom.**

☐ Teach it

☐ Fix or cut what's wrong

☐ Check facts, level, bias and local fit

☐ Ask for a draft, giving context

✎ **Think of the next material you might ask an AI to draft. Which of the four checks would matter most for your pupils, and why?**
