Keep pupils’ data private

AI · Level 2 · Lesson 4

Today we will

- Sort information into fine to share, only without names, and never.
- Make information safer by removing names and clues.
- Explain why what goes into an AI tool can come out again.

Remember

- What we type is stored by the company and may train later models.
- Names with marks, health, family matters, photos, voices and ID numbers never go in.
- Take names out first, and remember: many AI tools are only for people aged 13 and over.

Traffic light

1. Warm-up (5 min): Would you shout this across the market? Three quick examples.
2. Teach (8 min): What happens to what we type, and why it can come out.
3. Traffic light (15 min): Groups sort cards into green, amber and red.
4. Make it safer (7 min): Groups remove names and clues from red cards.
5. Wrap-up (5 min): Talk about the hard cards, then the exit ticket.

Make one set of ten cards per group: a lesson topic, a question about fractions, the school timetable, a story with made-up names, a poem a pupil wrote, a test score with a name, a class photo, a pupil's home address, a note about an illness, a parent's phone number. Draw green, amber and red circles on the board. No time to make sets? Write the ten items on the board, numbered; each group writes green, amber or red next to each number on a scrap of paper.

Let’s discuss

1. Which card was hardest to sort, and why?
2. How can we turn a red card into an amber one?
3. Why can something we type into an AI tool come out again?

Exit ticket

- Write one piece of information that must never go into an AI tool, and why.
